B.E. Artificial Intelligence & Machine Learning | Sri Siddhartha Institute of Technology, Tumakuru

Professional Summary

B.E. graduate in Artificial Intelligence and Machine Learning with hands-on experience building AI-powered products. Completed an AI Product Internship at Innervse Technologies (Feb – May 2026), working on 3 live projects involving LLM workflows, prompt engineering, speech-to-text, and chatbot integration. Built IntelLearn — an AI teaching platform using Whisper, RAG, FastAPI, and Docker — and InsightIQ, an enterprise-style AI-powered Data Analytics and Decision Intelligence Platform. Skilled in LLM integration, NLP, computer vision, Python, and full-stack AI product development.

EXPERIENCE

AI Product Intern

Innervse Technologies

Feb 2026 – May 2026

- Built LLM-based AI workflows and automation pipelines using REST APIs and backend integrations.
- Performed prompt engineering and accuracy benchmarking to improve AI response quality and consistency.
- Integrated speech-to-text (ASR), chatbot, and NLP features into live production systems.
- Handled data annotation, validation, and dataset preparation for AI model workflows.
- Collaborated on debugging, testing, and rapid prototyping across 3 live projects.

Education

Sri Siddhartha Institute of Technology, Tumakuru

2022–2026

Bachelor of Engineering (Artificial Intelligence and Machine Learning)

CGPA: 6.8/10

Gnanapriya PU College, Madhugiri

2020–2022

Karnataka PUC Board

66%

Mount View Public School, Madhugiri

2019

KSEE Board

88%

Projects

IntelLearn – AI Powered Teaching Platform

Nov 2025 – May 2026

- Developed AI-powered teaching assistant with real-time speech-to-text (ASR) caption generation.
- Built NLP-based automatic notes generation using summarization techniques.
- Integrated contextual chatbot support using Retrieval-Augmented Generation (RAG) and LLaMA 3.3 70B.
- Designed modular AI workflow combining transcription, PPT/PDF notes generation, summarization, and AI tutoring.
- Implemented automated transcription, notes generation, quiz generation, and document generation workflows.
- Designed backend APIs and streaming data pipelines for real-time classroom audio processing using LiveKit WebRTC and Deepgram Nova-3 live captioning.
- Integrated multiple external speech/AI services and databases to support scalable application operations.
- **Tech Stack:** Python, FastAPI, React 19, TypeScript, Whisper (via Groq), OpenAI APIs, RAG, LLaMA 3.3 70B, Supabase, Docker, Deepgram Nova-3, Groq API, LiveKit WebRTC, Tailwind CSS, Framer Motion.

InsightIQ – AI-Powered Data Analytics & Decision Intelligence Platform

2026

- Designing an enterprise-style platform covering a 9-step workflow: data ingestion, data trust/validation, data understanding, root-cause analysis, predictive forecasting, decision support, dashboards/reporting, continuous monitoring, and human feedback/audit lineage.
- Built Step 1 (Multiple Data Inputs) supporting 7 source types: CSV, Excel, JSON, SQL Database, Google Sheets, REST API, and Google Drive.
- Architected the system to keep raw and trusted data separate with full lineage, use LLMs only for natural-language explanation (never for fabricating figures), and keep the human analyst as final decision-maker on AI recommendations.

- **Tech Stack:** React, Vite, Tailwind CSS, FastAPI, Python, PostgreSQL, Pandas, Polars, SQLAlchemy, scikit-learn, XGBoost.

E-Commerce Platform

Mar 2026

- Developed responsive full-stack e-commerce platform with backend product management.
- Implemented authentication, REST APIs, and database integration.
- Designed frontend interface for product browsing and order management.
- **Tech Stack:** Python, Flask, MySQL, HTML, CSS, JavaScript.

Weather Forecast Application

Feb 2026

- Built real-time weather forecasting application using external weather APIs.
- Implemented location search, live weather updates, and responsive dashboard interface.
- **Tech Stack:** Python, REST APIs, HTML, CSS, JavaScript.

Air Drawing Using Hand Gesture Recognition

Jan 2024 – Jun 2024

- Developed real-time drawing system using hand gesture recognition.
- Implemented colour selection, eraser mode, and dual-hand gesture controls.
- **Tech Stack:** Python, OpenCV, MediaPipe, NumPy.

LiFi Data Transmission System (Hardware Project)

Jan 2023 – Jun 2023

- Designed wireless communication system using light as transmission medium.
- Successfully transferred data between communicable devices.
- **Tech Stack:** Arduino Uno, Embedded Systems, Arduino IDE.

Technical Skills

Programming Languages: Python,SQL, JavaScript, HTML5, CSS3
 Backend Development: FastAPI, Flask, REST API Development, API Integration, Authentication, CRUD Operations
 Frontend: React.js, Vite, Tailwind CSS, HTML5, CSS3, JavaScript, Framer Motion
 Databases: MySQL, PostgreSQL, Supabase
 AI & Machine Learning: LLM Integration, Retrieval-Augmented Generation (RAG), Prompt Engineering, NLP, Speech-to-Text (ASR), Text-to-Speech (TTS), Computer Vision, Workflow Automation, scikit-learn,Dataset Annotation
 AI APIs & Models: Groq API, OpenAI API, Deepgram API (Nova-3), Whisper API, LLaMA 3.3 70B, Grounding DINO, SAM2
 Real-Time & Streaming: LiveKit WebRTC, Live Captioning, Streaming Data Pipelines
 Tools & DevOps: Git, GitHub, Docker, VS Code, Vercel
 Core Computer Science: Object-Oriented Programming (OOP), DBMS, Computer Networks, Software Engineering, System Design.

Certifications & Achievements

- Artificial Intelligence Course – Adverk (2023)
 - NPTEL – Introduction to Intellectual Property (2025)
 - Oracle Database Course (2024)
 - HTML Certification (2024)
 - Participated in National Level Project Competition – Line Follower Bot (2023)
 - Secured 2nd Place in Robo Race Competition (2022)
 - Inspire Award – Agriculture Fertilizer Spraying Drone (District Level, 2020)
